

## OVERVIEW

Veritas™ Enterprise Vault.cloud is a cloud-based archiving service that helps organizations store, manage, and discover business-critical information. The service is quick and easy to deploy and provides your organization with cloud-based storage and retention for a predictable monthly fee. Enterprise Vault.cloud defensibly captures your information in a single, searchable online repository within the Veritas secure and private multi-tenant data centers. Its capture method also prevents spoliation (the alteration or destruction of information which can make it invalid or unusable as evidence) by preventing your users and administrators from deleting or modifying archived information.

## ARE YOU PREPARED FOR AN eDISCOVERY REQUEST?

Motions to discover electronic data are commonplace in today's world of litigation; yet, more often than not, organizations are unprepared to find electronically stored information (ESI), including emails, attachments, files, and social media conversations.

Veritas Advanced eDiscovery supports cross-functional collaboration on matters and investigations so that your internal and external legal teams, IT, HR, and other organizational stakeholders can work more efficiently together. The archive provides these professionals with the built-in tools they need to quickly locate their intended dataset, including real-time iterative search capabilities, built-in collaborative eDiscovery workflow, and flexible online export options.

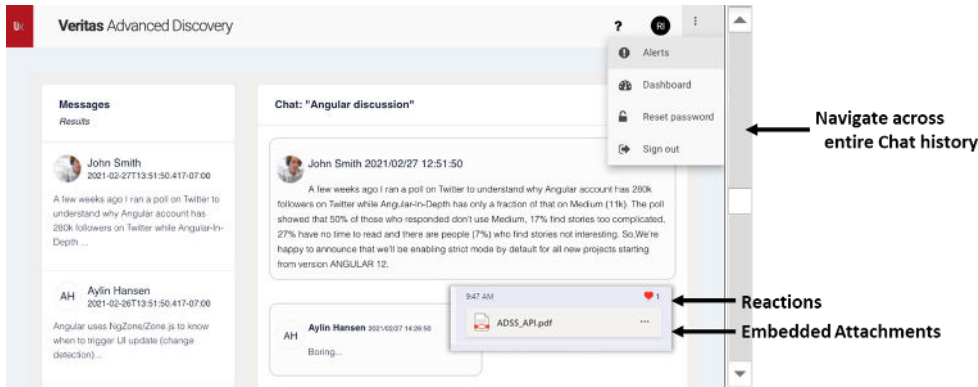

## GET LITIGATION READY

With the unrelenting explosion in electronic information, interest in archiving has expanded from highly-regulated companies to countless organizations worldwide, large and small. To avoid heavy fines and severe legal sanctions, your organization needs an easy way to search for relevant information and quickly fulfill eDiscovery or investigative requests. Advanced eDiscovery stores and indexes every email and attachment, content from unified communications and instant messaging systems, as well as files from Microsoft SharePoint® and Box and Salesforce® Chatter communications in a single, online repository.

- Accelerate eDiscovery and other investigative inquiries with scalable grid architecture, advanced indexing technology and powerful search capabilities that deliver results in seconds.
- Streamline matter management by giving your organization's legal team and outside counsel direct access to archived information with a built-in collaborative workflow that allows them to share the review workload across multiple reviewers, quickly cull through search results, and categorize information.
- Minimize disruption to your organization's IT team by allowing designated internal and external reviewers and administrators to perform self-service online exports of search results.

## CONTENT CAPTURE WITH MERGE1

Merge1 complements Advanced eDiscovery to extend archiving to the data sources most relevant to your regulatory compliance, internal policies and eDiscovery initiatives. Achieve end-to-end SaaS eDiscovery, reactive collection of 120+ content sources with Merge1 integration for defensible, targeted collections along with metadata enrichment for early case assessment in rich, native view.

## ADVANCED, ITERATIVE SEARCH CAPABILITIES

Scalable grid architecture and advanced indexing technology allows Advanced eDiscovery to deliver search results in seconds. In addition, the product's powerful search functionality allows your designated reviewers and administrators to build iterative searches (also referred to as search-within-search) using several different criteria (e.g., keyword, custodian, date range) and continually refine searches until the relevant information is located. If the reviewer adds criteria that narrow the search results too significantly, they can simply delete the term that limited the results, without having to re-build the entire search.

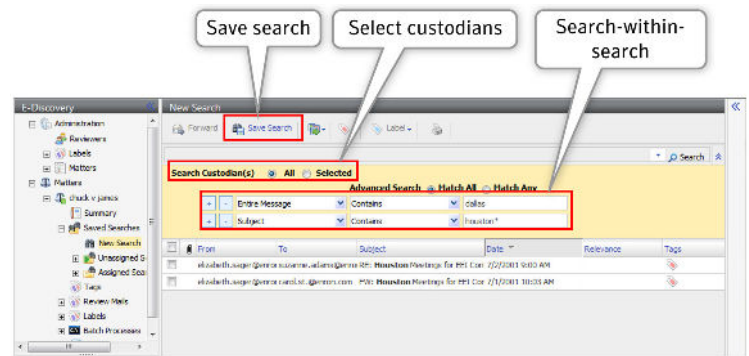

Figure 1. Quickly conduct advanced searches using several different criteria.

Once the desired criteria are established, your reviewers or administrators can save the search so that any new information meeting the criteria is automatically added to it, significantly reducing review time. Boolean, proximity, and wildcard search functionality are also available and give designated reviewers and administrators another method to quickly find relevant information and further cull search results prior to export.

In addition, SharePoint and Box files as well as attachments shared in Chatter posts are stored in the archive and included in search results (actual Chatter posts are included in the body of the message and also appear in search results).

## COLLABORATIVE eDISCOVERY WORKFLOW

Collaborative eDiscovery workflow encompasses all the matter management capabilities in Advanced eDiscovery that allow multiple reviewers to interact and collaborate on a specific matter as part of the eDiscovery process. Once a matter is created, your administrator can provision each reviewer with distinct privileges within the matter, allowing them to perform functions such as reviewing messages, viewing matter logs/reports, creating exports, managing other reviewers, and/or editing a matter.

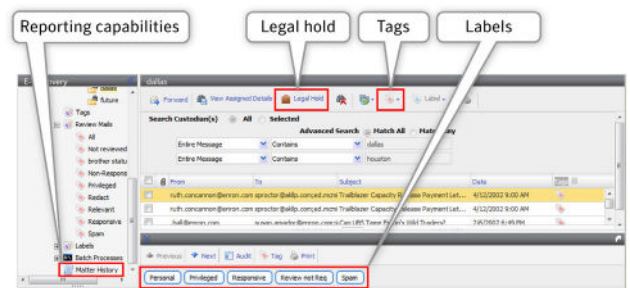

Figure 2. Easily manage matters and multiple reviewers.

Matter Information Summary										
Matter Description										
Frank v James										
# of reviewers	4	Matter Expiry Date	Never							
# of Custodians	4	Matter Status	Active							
# of e-mails	17996	On Legal Hold	No							
# of e-mails on legal hold	81									
Custodian Information										
Sr. No.	Custodian Name	# of e-mails								
1	Bill Williams	4467								
2	Chris Germany	7066								
3	Craig Dean	3194								
4	Elizabeth Sager	3269								
Reviewer Summary										
Sr. No.	Reviewer Name	Assigned	brother status	Non-Responsive	Not reviewed	Privileged	Redact	Relevant	Responsive	Spam
1	Peggy Lee	9	0	0	9	0	0	0	0	0
2	Jim Lee	28	0	0	27	0	0	1	0	0
3	Bruce Lee	12	0	0	12	0	0	0	0	0
4	External Reviewer	32	0	0	31	0	0	1	0	0

## FLEXIBLE EXPORT OPTIONS

Advanced eDiscovery allows your designated reviewers and administrators to easily perform self-service, online exports of search results. Archived information can be exported from the archive in EML, PST, and NSF formats, with or without EDRM XML files, so that it can be imported into solutions like the Veritas™ eDiscovery Platform. The Veritas Advanced eDiscovery export menu also allows your authorized reviewers and administrators to name and password-protect their exports.
